About

The CruisingReview.com website originally started off as a project to develop a comprehensive travel review blog based on Filemaker database software (databases are the best way to organize huge amounts of data such as photos and reviews), but then became a passion. After all, who doesn't like traveling ? In my travels, I have met many inspiring people, who encouraged my passion for inventing, and thus led to my developing alternative energy systems and concepts.

Website Format

You will note that our website is free of advertising, junky social media tags, and annoying pop-ups. You can help support this site by telling the resort and cruise ship company that you saw them reviewed here.

The process is the glue, to whatever you do.

Feeling bogged down ? Not enough time to do things. Always running late ? Stressed out because the to-do list never gets started ? Behind in video editing ? Social Media posts never on time ? I am the Marie Condo of process and time-saving engineering.

Major focus. Streamlining. Do what you do in a better way, and you will be rewarded.

Major focus. Streamlining. Do what you do in a better way, and you will be rewarded.

Becoming more of a common theme now is streamlining travel, business, and the way things are done. Seamless travel is the core thread of time, to better your experience, while enhancing your time and money. Our focus is on target to reduce time on your devices, and get you back into the experience. Streamlining is now how I run my multiple businesses, and is the infrastructure which allows me to do more, with less. I apply this strategy from everything from packing and luggage hacks, to putting my entire office on my iPhone 11 Pro. The methodology allows me to quickly and efficiently build structured Instagram and YouTube posts, while optimizing keywords and ranking. The ultimate reward is higher views, content, and subscribers (all while saving time which gets me back into enjoying travel). This will all come together in multiple posts below, and into a new book I'm working on, which will turn your life around. Forget Artificial Intelligence, use Intelligent Reasoning instead. Your mind is more powerful than the universe. Use it.

Set yourself free. Unleash your productivity, unabashed creativity, and bloom. Develop your own magical process. Sketch your own personal drawing, color it with a sunrise, to make a work of art.

I originally started Cruising Review back in 2001 to help other travelers define and enhance their experience. Even back then it was about the process of the journey, not the destination.

Now streamlining the process is the bullseye. If I can help you along the way, even better.

How I Started: The CruisingReview.com website originally started off as a project to develop a comprehensive travel review blog based on Filemaker database software (databases are the best way to organize huge amounts of data such as photos and reviews) in 2001, but then became a passion. After all, who doesn't like traveling ? In my travels, I met many inspiring people, who encouraged my passion for inventing, and thus led to my developing alternative energy systems and concepts.

Factual Reviews and Presentations: Cruising Review provides factual reviews. If a guest experience goes wrong, we try to work with the hotel staff to remedy the poor experience. We do this to encourage systematic change (we don't do it for free stays, points, or any reimbursement). We are very transparent in our reviews, and hope you appreciate that, since your time and money are valuable assets. Most travelers have limited time, and want to spend it enjoying the experience, not dealing with resort issues. I pay with my resort stays with cash, or points (earned through stays or via point credit cards). Either way, I pay for the resort. I don't solicit free stays at resorts, since that can bias your review.

Why Do I Travel ? I travel, because I love the ocean, the mountains, interaction of meeting new people, and constantly seek a beautiful sunset.

Projects and Work: I have a electric ship design project, where I'm designing and innovating new concepts for sustainable living at sea, based on a solar powered catamaran. See: <https://electricship.com> I own several small businesses, which provide me the income to travel. As a pilot and an inventor, I also have some revolutionary projects:

Waste Heat to Energy: Recycle waste heat to make power, and make low-grade heat accessible to make power through solar thermal, or even recovering heat from computer server farms. Unfortunately, nobody will fund such projects, so they are mostly dormant.

CO2 to Alcohol: Back in 2004 I invented a process which takes liquid CO2, and made fuel grade ethanol, methanol, and butanol (via a reverse fuel cell). Competing with a oil-based economy, and oil-based greed, is virtually impossible for a small business. The project was code named Ocean Ethanol. Two patents came out of the research and

Electric Ship AirBNB Yacht

When funding becomes available, I hope to develop and build a eco-electric-ship (multihull) which is fully sustainable for tourism, to travel the globe. Based on the book and community Gaviotas: A Village to Reinvent the World, I hope to evangelize solar technologies, and sustainable tourism, with zero environmental impact (actually will enhance the environment) around the world. When ready, the concept of a eco-ship will be showcased at a new website, ElectricShip.com
