DIY skin cream experimenting to help with long covid symptoms to see if has similar effects like experimental BC 007 but using Berberine botanical.

PDF Version of the webpage (first pages)

Long Covid Relief

Saw some research on DW German TV documentary for German inspired BC 007, which is an experimental solution for Long Covid. BC 007 was successfully used for the treatment of a Long Covid Patient. G protein-coupled receptors in patients with persistent Long-COVID-19 symptoms.

Did a search for any similar botanical with similar remedy effects, and came up with Berberine (see link below). Berberine containing plants have been traditionally used in different parts of the world for the treatment of inflammatory disorders, skin diseases, wound healing, reducing fevers, affections of eyes, treatment of tumors, digestive and respiratory diseases, and microbial pathologies. The physico-chemical properties of berberine contribute to the high diversity of extraction and detection methods. Additionally, many clinical and experimental studies suggest that berberine has several pharmacological properties, such as immunomodulatory, antioxidative, cardioprotective, hepatoprotective, and renoprotective effects.

I ordered some Barberry extract and will make some skin cream to test. Also ordered some Barberry capsules for the same.
